Education

North South University (NSU)
BS in Computer Science & Engineering
• CGPA: 3.08/4.0

Dhaka, Bangladesh
Sept 2019 – July 2024

Research Experience

Directed Research

February 2024 – July 2024

Supervisor: Dr. Mohammad Abdul Qayum, North South University

- Learned and constructed several quantum algorithms utilizing Qiskit simulation.
- Conducted research on breast cancer detection using Quantum Neural Network.
- Proposed a hybrid classical-quantum machine learning algorithm that outperformed other hybrid classical-quantum algorithms in terms of accuracy and training time.
- Submitted a paper on this work to the *International Conference on Computer and Information Technology (ICCIT)* that is under review.

Undergrad Thesis

July 2023 – July 2024

Thesis title: *Drug Repurposing for Covid-19 using Graph Neural Network*

Supervisor: Dr. Mohammad Ashrafuzzaman Khan, North South University

- Collected and analyzed data from various relevant sources and studies.
- Built a knowledge graph using a Graph Neural Network and utilized transfer learning to enhance the knowledge graph.
- A multi-layer perceptron was used as a drug ranking model trained on embeddings derived from the knowledge graph.

Publication

Breast Cancer Detection using Quantum Neural Network (Under Review)

September 2024

27th International Conference on Computer and Information Technology (ICCIT 2024)

Projects

Improving Chest Radiograph Detection on Imbalanced data

January 2023 - June 2023

- Built a chest radiograph detection system using YOLOV5.
- Preprocessed Data with Weighted boxes fusion and utilized a classwise data balancing technique to handle data imbalance.
- Test time augmentation and ensemble method further improved the system.

Bad Root Canal Detection

May 2022 - June 2023

- Designed a root canal motoring system utilizing the Segment Anything Model (SAM) and YOLOV7.
- Data noise was handled through the BM3D algorithm.
- A classwise data balancing technique was applied to address data imbalance.

SETI Signal Classification

September 2022 - Jan 2023

- Employed various machine learning techniques and architecture to detect extraterrestrial radio signals.
- Transfer learning on EfficientNet and Transformer models generated better accuracy and lower training time.

National COVID-19 Vaccine Registration System

June 2021 - September 2021

- Developed a COVID-19 vaccine registration website using Django where users must verify using NID and OTP for security concerns.
- An encryption method was employed to secure the database.

Technical Skills

Programming Languages: Python, C\C++ , Java, JavaScript, SQL, Kotlin

Frameworks and libraries: PyTorch, TensorFlow, Keras, OpenCV, SciKit-learn, NumPy, Pandas, Matplotlib, Django, Qiskit

Tools & Technologies: Git, MySQL, MS SQL Server, SQLite, Android SDK, Firebase, Arduino, Microsoft Office, \LaTeX

Co-Curricular Activities

Problem Solving Bootcamp

December 2020 - Jan 2021

NSU Problem Solvers, North South University

- Participated in a boot camp focused on data structure and algorithms using C++ .
- Enhanced problem-solving skills by solving hundreds of problems and participating in weekly programming contests.

ICPC Preliminary Contest

April 2021

North South University

- Participated in the *International Collegiate Programming Contest (ICPC) 2021* preliminary contest, competing with over 1200 teams nationwide.

Professional Membership

IEEE Student Member
